Delicate
correction
of face and body

Company APTOS presents the unique method
of face and body delicate zones correction –

Aptos Nano

Non-invasive
procedure,
natural results!

Aptos Nano allows doing things, which formerly seemed to be impossible: smoothing out wrinkles on any, even very thin skin. This is the most delicate method among all the minimally invasive Aptos techniques. At the same time, it is very simple and gives desired aesthetic result. Aptos Nano is the first technique for reinforcement and revitalization of soft tissues with absorbable threads consisting of polylactic acid in combination with caprolactone.

Minimal traumatism

Aptos Nano — is a system, which consists of a thin injection guiding needle and ultrathin fiber. This structure makes the correction procedure much simpler and pretty much safe. A smooth thin needle made of high-quality steel is injected under the skin through a microhole and easily slides in the tissues without traumatizing them. After the completion of the procedure, the signs of involvement are almost completely absent (pinholes disappear very quickly).

Innovations and technologies

Aptos Nano fibers have a special form, relief structure and are in 2.5 times thinner than typical suture materials. Like other Aptos products, they are 100% compatible with organism tissues. There is L-lactic acid as a part of composition (it is a natural substance for human organism) which stimulates cells renewal processes.

Instant result

Under the skin fibers create a supporting framework, fixing tissues in the right position so that the desired result appears almost immediately after the procedure completion. The transformation happens as if by magic — only in 20 minutes skin finds youth and freshness again!

Safety

Use of Aptos Nano does not require infiltration anesthesia so ensures avoiding edemas and hematomas. The risk of allergic reactions is minimal. At high efficiency, method is so delicate and safe that it does not require a rehabilitation period. Aptos Nano fibers can be used in combination with other Aptos products, as well as with fillers, hardware-based cosmetology, meso- and plasmotherapy, peeling and neurotoxins.

Rationality

Nano correction method is ideally right for women and men used to keep active lifestyle, monitoring their health, and wanting to get a better form literally during weekend. The methods ensure carrying out the correction of the face and body zones where age-related changes appear first, in other words, where skin is mostly thin and sensitive.

Efficiency

Aptos Nano fibers are made of caprolactam (an absorbable material that releases from the organism after one year. L-lactic acid which is a compound of the product triggers revitalizing of tissues at cell level. In other words, Aptos Nano fibers provide double rejuvenating effect: lifting and round the clock mesotherapy.

APTOS

nano

Aptos Nano threads are made of polylactic acid in combination with caprolactic acid. It stimulates collagen formation and prolongs absorption period.

Thus using of Aptos Nano gives a double result: lifting-effect, noticeable immediately after the procedure, and rejuvenating mesotherapeutic effect, lasting until the fibers are in organism.

Advantages
are obvious

1

Used even for the most delicate zones

2

100% biocompatible with human tissues

3

2.5 times thinner than ordinary thread

4

Natural result for long period

APTOS

mamo spring

NS4, NS7 – absorbable spring
threads for revitalization
and armoring

Package:

NS4 – P(LA/CL) thread EP 1, USP 5/0, 400 mm spirally wrapped
around Lancet point needle 23G x 40 mm – 10 pcs.

NS7 – P(LA/CL) thread EP 1, USP 5/0, 940 mm spirally wrapped
around Blunt point needle 23G x 70 mm – 10 pcs.

Spring threads designed for correction of mimic
wrinkles. Nano Spring smooths the skin and never
migrates to lateral zones.

Wrinkles disappear creating natural look.

APTOS

nano

vitis

NV4, NV7 – absorbable
twisted threads for
revitalization and armouring

Package:

NV4 – P(LA/CL) twisted pair threads EP 1, USP 5/0,
65 mm – 10 pcs; Lancet point needle 22G x 40 mm – 10 pcs.

NV7 – P(LA/CL) twisted pair threads EP 1, USP 5/0,
135 mm – 10 pcs; Blunt point needle 22G x 70 mm – 10 pcs.

Two twisted threads preloaded in the small needle.

After inserting the suture, threads start untwisting
and increasing the volume of the treated area.

Nano Vitis reshapes the surface of the skin and makes
it visibly smoother. Wrinkles disappear creating natural look.

A non-invasive procedure, natural results!

Correction zones:

1. marionette lines (NS4)
2. nasolabial folds (NS4, NV4)
3. interbrow folds (NS4, NV4)
4. interbrow wrinkles (NS4, NV4)

Once Nano threads are applied, the polylactic acid acts on the deeper layers of the skin and helps to increase the volume of saggy areas, restoring shapeliness to the face gradually and perfectly naturally.

Correction zones:

1. crow's feet (NV4)
2. wrinkles above the upper lip (NS4)
3. forehead wrinkles (NS7, NV7)
4. eyebrows (NS4)
5. nose (NS4)

After inserting the suture, threads are left under the skin and empty needles are pulled out.

Aptos Nano technique is an outpatient procedure, not requiring any additional medical equipment.

The face is redefined, volume - restored and the effects of ageing significantly reduced.

Correction zones:

1. upper eyelids (NV4)
2. lower eyelids (NV4)
3. wrinkles around ears (NV4)
4. mental area (NV7)
5. neck (NV7)

Excellent Results!

Correction zones:

1. correction of lip contour (NS4)
2. décolletage area (NV7)
3. aging hands (NV7)
